

25 mm
ThermoPEX[®]
Insulated Piping System

For the best performance from your outdoor furnace system.

ALL NEW!

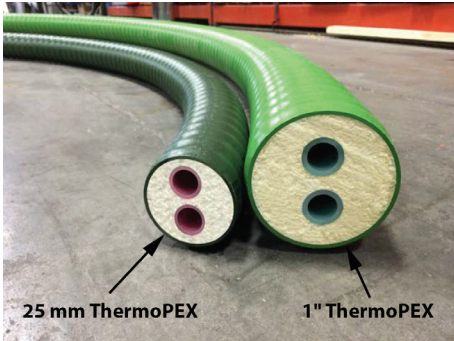

EASIER TO HANDLE. EASIER TO INSTALL.

All-new 25 mm ThermoPEX is the same great insulated piping system that is easier-to-handle, transport and install.

BECAUSE PERFORMANCE MATTERS.

Choosing the best insulated piping system for your outdoor furnace is imperative to lower heat loss and reduce the amount of wood you'll burn. The ThermoPEX insulated piping system from Central Boiler is a proven system that saves energy and maximizes the efficiency of your outdoor furnace. While 1" ThermoPEX is recommended for all installations because of its superior insulation value over all distances, 25 mm ThermoPEX is a good choice in installations with shorter distances. It is very flexible and easy to work with.

1" ThermoPEX provides superior insulating properties; 25 mm ThermoPEX is more flexible and easier to handle

25 mm ThermoPEX is easier to transport

ThermoPEX only needs a narrow trench for installation

ENERGY EFFICIENT: ThermoPEX saves energy and maximizes efficiency. The corrugated waterproof jacket keeps moisture out and inner construction locks the heat in. Greater system efficiency maximizes the delivery of heat from each pound of wood so you will burn less wood compared to a system using inferior insulated piping.

FLEXIBILITY: Easier to work with, easier to install.

RELIABILITY: ThermoPEX is a proven system manufactured to ensure an airtight, waterproof urethane insulation enclosed in a thick, durable, waterproof, flexible protective jacket.

FAST: Easy to transport, easy to handle and easy to install, requiring only a narrow trench approximately a foot deep.

Inferior insulated piping comes at a price.

Install ThermoPEX for the most efficient system performance.

25 mm ThermoPEX Piping System

\$865*

*M.S.R.P. per foot. Prices may vary and do not include shipping. See your dealer for more information.
